NexaBook Developer 14 User Guide

The Perfect Balance for Developers

Portable. Powerful. Professional.

- Optimized for Development
- Lightweight and Portable
- All-Day Battery Life
- Business-Grade Security

- **Intel® Core™ Ultra 7 with integrated NPU** Up to 47 TOPS
- **32 GB DDR5** (up to 64 GB)
- **1 TB NVMe SSD** (expandable)

CODE | CONTAINERIZE | DEPLOY | EVERYWHERE

1. Meet Your NexaBook Developer 14

Developer 14 is a portable professional notebook designed for software engineers who value battery life, memory capacity, security and a clean developer workstation experience. It is optimized for IDEs, containers, databases, cloud tooling and moderate local AI experimentation.

Specifications

Processor	Intel Core Ultra 7-class processor
NPU	Integrated NPU, up to 47 TOPS
Graphics	Integrated Intel Arc-class graphics
Display	14" 2.8K OLED, 120 Hz
Memory	32 GB DDR5; configurable up to 64 GB
Storage	1 TB NVMe SSD; expandable
Wireless	Wi-Fi 7, Bluetooth 5.4
Ports	2 x Thunderbolt 4, 2 x USB-A, HDMI 2.1, audio
Battery	72 Wh
Weight	Approx. 1.42 kg
OS	Windows 11 Pro

2. Recommended Developer Setup

Area	Examples
.NET	Current .NET SDK, Visual Studio / VS Code, NuGet
Containers	Docker Desktop or approved container runtime
Kubernetes	kubectl, Helm, local Kubernetes when required
Data	PostgreSQL, SQL Server developer tools, Redis
Cloud	Azure CLI, Git, GitHub tooling
AI	Cloud model APIs, embeddings, RAG development; lightweight local models where resources permit

3. Using Your Device

For long development sessions, keep operating system, firmware and drivers current. Container workloads and local clusters can consume significant memory; stop unused services when working on battery power.

Local AI guidance

Developer 14 is intended primarily as a software-development notebook. Its NPU can accelerate supported on-device AI experiences, while integrated graphics and system memory can support selected local inference workloads. For CUDA-dependent workloads or larger local models, choose an AI Studio or workstation-class system.

4. Security

Use Windows Hello, device encryption, Secure Boot and organizational identity controls where applicable. Do not store API keys, model-provider credentials or production secrets in source code. Prefer managed secret stores for deployed applications.

5. Troubleshooting Quick Reference

Symptom	First checks
Slow container workloads	Check memory pressure, CPU usage and background services
Local model fails to load	Verify model size, available RAM, runtime compatibility and quantization
External display unavailable	Verify cable, dock capability, input source and graphics driver
Battery drains quickly	Review performance mode, containers, local clusters and GPU-intensive tasks
Wi-Fi instability	Update wireless driver; verify router band and enterprise policy

Educational product notice

NexaBook Developer 14 is a fictional product created for the NexaStore educational case study.
