CANCELLATION

Order Cancellation Policy

Cancellation eligibility, timing and payment reversal

NexaStore Policy Library • 2026 Edition

1. Cancellation Principle

A customer may request cancellation while an order remains in a cancellable fulfilment state. Once shipment has been handed to the carrier, cancellation normally changes to a return-after-delivery process rather than stopping the shipment.

2. Eligibility by Order Status

Order status	Cancellation	Handling
Order confirmed	Usually allowed	Cancel order and reverse/void payment where possible
Processing	Usually allowed if fulfilment has not locked	Cancellation request sent to fulfilment
Packing / fulfilment locked	May not be possible	Attempt stop; otherwise customer may return after delivery
Shipped	Not cancellable	Returns policy applies after delivery
Delivered	Not cancellable	Returns policy applies
Custom build started	Restricted	Terms shown at order determine eligibility

3. Payment Reversal

Payment state	Typical treatment
Authorization only	Authorization may be voided/released
Captured payment	Refund initiated after cancellation confirmation
EMI / financing	Provider-specific reversal process applies
Gift credit / store credit	Credit restored after confirmed cancellation
Mixed payment	Each payment component follows its original method where supported

4. Items with Special Conditions

Order type	Cancellation treatment
Pre-order	Generally cancellable before allocation/shipping unless disclosed otherwise
Custom-configured workstation	May become non-cancellable after build starts
Digital license	Can be cancelled before activation/delivery where technically possible
Bundle	Entire bundle may need cancellation; partial cancellation depends on fulfilment rules
Marketplace seller item	Seller-specific cancellation terms may apply if disclosed

5. Cancellation vs Return

Question	Cancellation	Return
When?	Before shipment/fulfilment cutoff	After delivery
Physical product movement	Normally none	Product comes back to seller/warehouse
Policy source	Cancellation Policy	Returns and Refund Policy
Refund trigger	Confirmed cancellation	Return inspection/approval where required

6. Agent Handling Rules

Need	Source / action
Current order status	Order/fulfilment service
Cancellation eligibility rule	This policy via RAG
Custom-build flag	Order/product service
Cancel the order	Authorized cancellation tool
Payment reversal status	Payment service
Explain why shipment cannot be cancelled	RAG policy + live order state

7. Example

If a customer asks to cancel a laptop and the live order service reports 'Shipped', the agent should not claim that cancellation is possible merely because this document says early-stage orders can be cancelled. It should explain that the shipment has crossed the cancellation boundary and guide the customer to the return process after delivery.

8. Important

This is a fictional educational policy. Real cancellation and refund obligations vary by jurisdiction and payment method.
