PRICE MATCH

Price Match Policy

Eligibility, evidence, exclusions and adjustment rules

NexaStore Knowledge Series • 2026 Edition

1. Purpose

NexaStore may match an eligible lower advertised price for an identical product sold by an approved retailer, subject to verification and the exclusions below. Price matching is intended to compare genuine like-for-like offers, not auction, clearance or unverifiable listings.

Requirement	Rule
Identical item	Brand, model, configuration, color and included warranty must match.
Availability	Competitor item must be in stock and available for immediate purchase.
Seller	Offer must be sold directly by an approved retailer, not an individual marketplace seller.
Price evidence	Publicly accessible current price must be verifiable.
Geography	Offer must apply to the same delivery market and comparable taxes/shipping basis.
Timing	Request may be made before purchase or within 7 calendar days after NexaStore purchase.

2. Common Exclusions

Excluded offer	Reason
Clearance / liquidation	Not a normal current retail offer
Used / refurbished / open-box	Condition is not identical
Membership-only or employee price	Not generally available
Coupon requiring unique code	Not a directly comparable public price
Bundle with different contents	Not like-for-like
Pricing error	Obvious errors are not eligible
Marketplace third-party seller	Seller/source cannot be treated as equivalent retail inventory

3. Price Adjustment

If an eligible post-purchase match is approved, the difference is refunded to the original payment method where supported. The adjustment does not change the original product warranty or return window.

4. Agent Handling

Need	Source
Customer's purchase price	Order service
Current NexaStore price	Product/pricing service
Competitor evidence	Verified external evidence submitted or retrieved by authorized workflow
Eligibility rules	This policy via RAG
Issue adjustment	Authorized pricing/refund tool
Final approval	Business rules / human escalation where required

5. Important

This fictional policy is for the NexaStore educational case study. A production implementation should maintain an approved-retailer list and auditable price-verification workflow.
