Product Warranty Policy

Standard warranty coverage, exclusions and claim handling

NexaStore Knowledge Series • 2026 Edition

1. Warranty Framework

Nexa-branded products are covered by the fictional Nexa limited hardware warranty below. Third-party products sold through NexaStore generally use the manufacturer's warranty unless a NexaStore extended-care plan is separately purchased.

Product	Standard warranty	Primary provider
NexaBook laptops	24 months	Nexa
NexaStation workstations	36 months	Nexa
NexaAI Mini workstation	24 months	Nexa
NexaGPU products	36 months	Nexa
Nexa accessories	12 months	Nexa
Third-party brands	Manufacturer-defined	Original manufacturer / authorized service

2. Covered Defects

• Manufacturing defects in covered hardware components.

• Failure of a covered component during normal intended use.

• Battery defects where health/capacity falls outside the applicable warranty threshold due to manufacturing defect rather than normal wear.

• Display, keyboard, port or cooling-system failures caused by covered hardware defects.

• NexaGPU hardware failure not caused by unauthorized modification or operation outside documented limits.

3. Exclusions

Exclusion	Examples
Accidental damage	Drops, impact, cracked panels, liquid ingress
Misuse	Operation outside published environmental/electrical limits
Unauthorized modification	Board-level alteration, unsupported firmware modification
Normal wear	Cosmetic wear, expected battery aging, consumable degradation
Data / software	Customer data loss, third-party software issues, malware
External events	Power surge, fire, flood or other external physical damage

4. Warranty Claim Process

Step	Action
1. Validate purchase	Order number, product and serial number are confirmed
2. Triage issue	Support checks symptoms and troubleshooting history
3. Determine coverage	Policy, warranty dates and exclusions are evaluated
4. Service route	Remote fix, depot repair, authorized service or replacement
5. Resolution	Repair, equivalent replacement or other approved remedy
6. Close claim	Outcome and service record are retained

5. Repair and Replacement

Nexa may repair the covered product using new or serviceable equivalent parts. Where repair is impractical, Nexa may provide an equivalent replacement. A replacement does not restart the original warranty term unless explicitly stated; it continues for the remaining original term or 90 days, whichever is longer.

6. Data Responsibility

Customers should back up important data before service and remove confidential information where possible. Service procedures may require storage replacement or operating-system reinstallation. NexaStore does not treat warranty service as a data-backup service.

7. Agent Decision Boundaries

Question	Authoritative source
Is the order genuine?	Order service
Is warranty still active?	Purchase date + warranty entitlement service
What failures are covered?	This policy / manufacturer warranty knowledge
Has the device already been repaired?	Service history tool
Can the agent approve a replacement?	Only if workflow/authorization tool permits it
Can RAG itself issue a warranty decision?	No. RAG supplies policy context; business rules and authorized tools execute decisions.

8. Important

This is a fictional educational warranty policy. Real warranty obligations vary by jurisdiction and manufacturer.
