Returns and Refund Policy

Customer returns, eligibility, exceptions and refund handling

NexaStore Knowledge Series • 2026 Edition

1. Purpose and Scope

This policy defines return eligibility and refund handling for products sold directly by the fictional NexaStore marketplace. Marketplace-partner items may carry seller-specific conditions where clearly disclosed at purchase.

2. Standard Return Window

Product category	Return window	Condition
Laptops / desktops / workstations	14 calendar days from delivery	Unused or lightly evaluated; original packaging and accessories required
GPUs / components	14 calendar days	No physical damage; serial number must match order
Monitors / accessories	30 calendar days	Complete product with included accessories
Software / digital licenses	Non-returnable once activated	Eligible only for verified delivery/activation failure
Clearance / final-sale items	Non-returnable unless defective	Final-sale status must be shown before purchase

3. Return Eligibility

• A valid NexaStore order must be identifiable.

• The request must be initiated within the applicable return window.

• Serial-numbered products must match the shipped item.

• All supplied chargers, cables, adapters and bundled accessories should be returned.

• Customer-created accounts, passwords and personal data must be removed before device return.

• Normal evaluation is allowed; damage caused by misuse, modification or accidental impact is not covered by standard return rights.

4. Non-Returnable or Restricted Items

Situation	Policy treatment
Activated digital license	Not returnable after successful activation
Physically damaged by customer	Not eligible for standard return; warranty/repair assessment may apply
Missing serial label / tampered identifier	Return may be rejected pending investigation
Custom-configured enterprise workstation	Return only where the order explicitly includes a return right
Hygiene-sensitive opened accessory	May be non-returnable if disclosed before purchase
Defective-on-arrival item	Handled under damaged/defective workflow; standard return window does not remove statutory rights

5. Refund Method and Timing

Stage	Target handling
Return received	Item is logged and inspected
Inspection completed	Normally within 3 business days after receipt
Refund approved	Refund initiated to original payment method
Bank / card settlement	Typically 3-10 business days after initiation; financial institution timing may vary
Rejected return	Customer receives reason and available next step

6. Exchanges and Replacement

Where stock is available, a customer may choose an eligible replacement instead of a refund. Price differences for voluntary upgrades are payable by the customer. Defective or damaged deliveries follow the dedicated damaged-product process.

7. AI-Agent Handling Rules

Agent check	Required source
Order date and delivery date	Order service / transactional database
Exact product / serial number	Order and product services
Return-window rule	This policy / policy knowledge base
Whether item is final sale	Product/order transactional data
Refund status	Payment/refund service
Policy explanation	RAG retrieval from this document

8. Important

This fictional policy is designed for the NexaStore course case study and is not legal advice. Local consumer law would override conflicting commercial terms in a real implementation.
