AI MACHINES

NexaStore AI Machine Comparison Catalogue

Compare AI laptops, mini systems and workstations by workload

NexaStore Knowledge Series • 2026 Edition

AI Machine Comparison - 2026

Compare Nexa systems by local AI capability rather than generic performance labels. Memory requirements vary with model architecture, quantization, context, batch size and runtime.

Machine	Form	CPU / NPU	GPU / VRAM	RAM	Local LLM profile	Primary
NexaBook Developer 14	14-in laptop	Core Ultra 7 / up to 47 TOPS NPU	Integrated	32-64 GB	Small CPU/iGPU models	RAG app
NexaAI Mini	Mini PC	Core Ultra 7 / up to 11 TOPS	RTX 4060-class / 8 GB	32-64 GB	Small quantized models	Home AI
NexaBook Pro X16	16-in laptop	Core Ultra 9-class	RTX 5070-class / 12 GB	64 GB	Small-medium quantized models	RAG, age
NexaBook AI Studio 16	16-in laptop	Ryzen AI 9 / up to 50 TOPS NPU	RTX 5080-class / 16 GB	64-128 GB	Medium local models	GenAI +
NexaStation AI WS1000	Tower	Core i9-class 24c/32t	RTX 5090-class / 32 GB	64-256 GB	Larger local models	Heavy inf

Workload Fit

Machine	Embeddings	RAG dev	Local chat	Vision inference	DL training	Multi-service agents
Developer 14	Strong	Strong	Light	Light	Limited	Strong cloud-first
AI Mini	Strong	Strong	Moderate	Moderate	Light	Strong
Pro X16	Strong	Strong	Strong	Strong	Moderate	Strong
AI Studio 16	Strong	Strong	Very strong	Very strong	Strong	Very strong
AI WS1000	Excellent	Excellent	Excellent	Excellent	Excellent	Excellent

AI Buyer Profiles

Buyer	Recommended starting point	Reasoning
Cloud AI application developer	Developer 14	Local development does not require premium GPU when inference is managed in cloud
Local RAG / agent developer	Pro X16	64 GB RAM + 12 GB VRAM gives useful local experimentation headroom
Mobile GenAI specialist	AI Studio 16	16 GB VRAM and up to 128 GB system memory
Home lab / edge AI learner	AI Mini	Compact, lower-power discrete-GPU environment
Advanced local AI / CV engineer	AI WS1000	32 GB VRAM and large memory/expansion ceiling

Decision Rule for the Recommendation Agent

First retrieve exact customer constraints: budget, portability, local-vs-cloud execution, model size, workload and software requirements. Query structured product data for current machine facts. Retrieve guides/catalogues for explanatory reasoning. Do not use this static PDF as the source of live price or inventory.

Example cross-document retrieval

For 'I need a portable machine for local LLMs and 4K video editing', retrieve this catalogue plus the Local LLM Hardware Requirements Guide and Creator Workstation Guide, then intersect those recommendations with current product inventory.

Catalogue note

All specifications and product names in this catalogue are fictional and intended for educational use.
